

Accelerate Your Preclinical Drug Discovery Programs with... Human Micro-Tumor Bioassay Platform & Screening Services

- Novel 3D Oncology assay screens are developed using patented HuBiogel™ culture technology.
- Unlike traditional cell-based models, human Micro-tumors emulate multicellular growth, function & organization.
- Thereby, HuTumor models offer better physiological relevance and precise preclinical drug efficacy endpoints.

HuTumor Screening Services: (via MTA Contracts)

- Long-term drug activity/penetration analysis (2-4 week)
- Efficient throughput assays (100-5000 tumors per testing)
- Real-time functional & genomic analysis (imaging, RNA, DNA)
